## Step Motor Systems

Step Motors

#### Features

- Sizes 17, 23, 34 and 42
- Optimized for use with IDC's microstepping controls
- Bipolar current ratings for use with IDC's microstepping controls
- High torque-to-inertia, yielding high acceleration
- 120°C rated Class B winding
- 12-ft motor cables standard
- Encoder optional (sizes 23, 34, 42); see page G-61
- Quick disconnect motor cabling option (sizes 34 and 42)

Replace the Xs in the above part numbers with N, T or V:

N = 8 leads, 12 inches long

T = Series wired motor and 12-foot quick-disconnect cable included

V = Parallel wired motor and 12-foot quick-disconnect cable included

To confirm your selection, review the checklist on page G-6.

#### **Motor Performance**

\* 50% duty cycle max above 5 rps (300 rpm)

# A 30% torque safety margin is recommended when applying step motors.

Warning: Do not run S32 or S33 motors wired in parallel with a NextStep 240 drive or SmartStep 240. Motors will exceed their rated temperatures and be damaged. All motors should be wired in series when run with the NextStep 240 or SmartStep 240.

#### **Applying Gearmotors**

• See page I-1 for IDC gearmotor information and for how to determine gearmotor performance

quality shielded, twisted pair cable

Incremental dual square wave quadrature

The -EMK option provides an incremental 1000 line rotary encoder coupled to the rear shaft of our S, P and K Series step motors.

The -EM option provides an incremental 500 line rotary encoder coupled to the rear shaft of our S, P and K Series step motors.

An encoder is typically used with the SmartStep, S6961 and S6962 programmable step motor controls to provide stall detection and position maintenance. Encoders are also commonly used with displays to provide position information, or to provide position feedback to your own controller when using our NextStep<sup>®</sup> or S6002 drive.

-EM and -EMK are compatible with: S, P and K Series step motors and gearmotors, sizes 23, 34 and 42
